Does the caravan mirror fit your car?

Adjustment options for the best fit

The standard setting for the length of the lower arm (hook) is designed to fit a standard car (e.g. Volvo V70). For vehicles with larger wings (SUVs, Jeeps) or vehicles with limited space between the bonnet and wheel arch, adjustment is normally required.

Move the screws to increase or decrease the length of the arm. The spring should always remain under tension, but must not be loaded at its maximum extension.

The smaller spring can be reversed if necessary. The rubber-coated feet can also be bent slightly to achieve a better fit.
